

# SUBWAY EXTENSION

CONSTRUCTION UPDATE #28

24 February 2012

## Construction Activity for the Week of 27 February 2012

Piling work such as drilling and concrete activities continues on Grout Shafts 2 and 3, north of the Schulich Building during the next two weeks.

There will be typical construction related noise as a result of the drilling. Other work includes preparation of the ground as well as the building of a platform for the drill rig which will be used for the headwall and sidewall piling activities.

In order to achieve a safe platform for the drill rig, a portion of ground is removed and backfilled with granular materials which are then compacted. As a result of this activity, the occupants of the Schulich Building will likely experience some vibration in the north wing.

The compaction activity will commence over this weekend and limited compaction may occur next week.

As we become aware of any changes, we will forward the information as soon as they are known.

Some of these activities are subject to change due to unforeseen circumstances.

The Toronto-York Spadina Subway Extension (TYSSE) will extend the TTC subway system from Downsview Subway Station to the City of Vaughan, with two stations on campus: York University and Steeles West. The subway's arrival will alter the York experience, vastly improve how thousands of people commute daily, and will integrate York more fully into its surrounding communities.
