

SUBWAY EXTENSION

CONSTRUCTION UPDATE #29

24 February 2012

New Walkway Being Constructed between the York Research Tower and York Lanes

Work will be undertaken during the week of 27 February 2012 for the construction of a new walkway between York Lanes and YRT. The work will involve removal of existing wood hoarding, demolition/removal of the top portion of caissons placed for the utility excavation and preparation of the base for the walkway. The hoarding will be relocated to make room for a new 6 meter wide walkway.

The breaking of concrete will be carried out with a pneumatic concrete breaker with associated noise and vibration from this common construction work. In addition, the preparation of the base for this walkway and an additional walkway on the east side of Ian Macdonald Blvd. will involve compaction of granular material with a vibratory compactor.

Occupants along the south side of YRT and the east side of York Lanes may experience some vibration.

Construction activities are subject to change due to unforeseen circumstances.

The Toronto-York Spadina Subway Extension (TYSSE) will extend the TTC subway system from Downsview Subway Station to the City of Vaughan, with two stations on campus: York University and Steeles West. The subway's arrival will alter the York experience, vastly improve how thousands of people commute daily, and will integrate York more fully into its surrounding communities.
